Pages: 31
Distribution: F

This publication implements AFD 41-3, *Worldwide Aeromedical Evacuation*. It establishes a standardized packaging guide for all war reserve material (WRM) supplies and equipment carried in the aeromedical evacuation (AE) in-flight kit and provides guidance for standardization of all operational in-flight kits used to support day-to-day operations. The first 17 sections represent a different part of the in-flight kit. Attachments 1 and 2 are not part of the kit, but are part of supplies and equipment which accompany the kit. One (1) copy of this publication will be kept within each AE in-flight kit set at all times. It will be used to inventory the kit and when completed will be turned in to the AE equipment management section so any items which need replacement may be ordered. HQ AMC/SGXPA will update this publication when changes to the kit are made. Send comments and suggested improvements to this publication on AF Form 847, **Recommendation for Change of Publication**, through channels, to HQ AMC/SGXPA, 1180 W. Losey Street, Suite 1600, Scott AFB IL 62225-5319.
